

**THE BIGGEST APPLICATIONS ECOSYSTEM
FOR YOUR BUSINESS**

FactoryPOS

FactoryPOS is our Point of Sales application, ready to be installed on any Android device (Smartphones, PDA, Tablets, POS) & Windows devices.

FactoryPOS registers & controls in a very easy way the users, sales data, sales statistics & stocks.

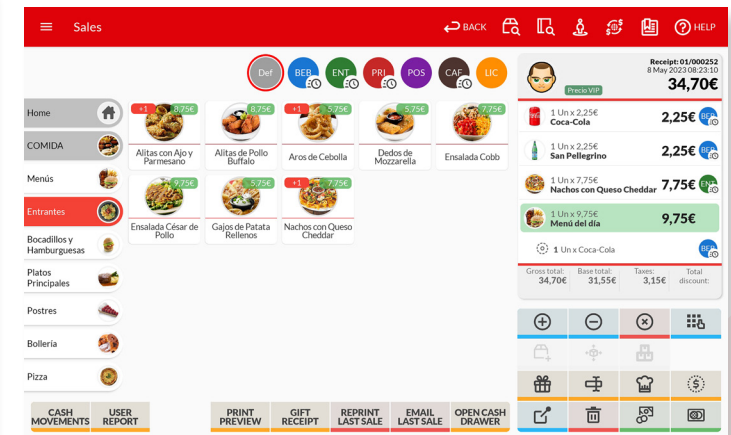

Is a multilanguage application (translated into 24 languages) & multi-region (adapted to the fiscal regulations of 46 countries and regions) it perfectly fits to the needs of Hospitality & Retail businesses.

It can be installed as standalone or in a network with other Android terminals. It can connect with payment gateways. It can connect to multiple peripherals and to the rest of our Applications Ecosystem.

When it is connected to FactoryCLOUD, you can easily access to the Setup and Statistics analysis modules. But it can also work as autonomus, specially for those customers where the internet connection is not possible.

FactoryPOS has the following functionality:

- Creation and Edition of basic databases
- Sales registration
- Receipt & Invoices printing
- Cash management
- Daily close procedures
- X and Z reporting
- Basic and Advanced statistics
- Tables management
- Ordering terminals
- Excel import & export
- Adapted to any kind of POS peripherals
- Kitchen printers
- Connected to FactoryKDS (Kitchen displays)
- Embedded backup system

BACKUP

FactoryCLOUD, has a cloud based Backup system, that allows protecting the databases and sales statistics data of your Point of Sales systems, by having daily automated copies on Amazon servers & providing an administration platform to manage them. It stores one copy for every day of the last week, the last day of the last 6 months and the last day of every year.

It also allows to load on Cloud a product pictures gallery, Excel files for being accessible at the Point of Sales systems, as well as giving access to our extense image gallery hosted at FactoryCLOUD.

It is perfectly embedded on FactoryPOS & FactoryKIOSK.

FactoryPOS allows the connection of multiple peripherals to the point of sales terminal:

- Receipts & kitchen printer
- Weighing scales
- Barcode readers
- Cash drawers
- NFC/RFID/iButton readers
- Bank cards payment terminals
- Automated cash recyclers

It can work with peripherals connected through a variety of ports, such as serial, USB, bluetooth, as well as wifi & ethernet network.

Available in **24** languages.

Adapted to **46** countries & regions.

Compatible with over **200** peripheral & device models.

Certified on POS terminals from the manufacturers market's leaders:
Sunmi, Imin, Posbank, Poslab.

FactoryCLOUD

FactoryCLOUD is our cloud-based back-office that works in connection with our Point of Sales applications.

The data is accessible from any web browser on any device.

It provides a multi-company & multi-store working environment that allows managing small companies and companies with multiple outlets. In order to make it more accessible, it is available in 24 languages and it selfs adapts to any kind of devices.

FactoryCLOUD has several modules, allowing to any customer selecting only the ones he needs. The modules can be activated any time.

These are the specifications of each one of the modules:

FactoryCLOUD/Statistics:

This module allows receiving the sales statistics from one or multiple shops every 20 minutes as well as the end of day reports (both Financial and Employees report).

The information can be directly checked at the web browser accessing to all the historical information stored.

FactoryCLOUD/Setup:

This module allows the cloud-based databases setting for FactoryPOS & FactoryKIOSK. You can create and edit the employees, products & families, images and price levels databases.

The data synchronization with the point of sales applications will be made unattended and automatically.

Image	Code	Name	Type	Family	Subfamily	Sales Tax-type	Amount	Active	Favorite	Actions
	1	Coca-Cola 33cl	Normal	Soft Drinks		N/A 10%	2.90€	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
	3	Coca-Cola Light	Normal	Soft Drinks		N/A 10%	2.90€	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

	28	Heineken can	Normal	Beer		N/A 10%	3.00€	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
	29	Corona Light bottle	Normal	Beer		N/A 10%	3.00€	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	

FactoryCLOUD/Backup:

The backup copies of a Point of Sales system are critical on any installation. Our solution to the problem is this module. A backup system hosted at the Cloud completely automated and managed from any web-browser, providing copies for each day of last week, last day of last 6 months and last day of every year.

FactoryCLOUD/Fiscal:

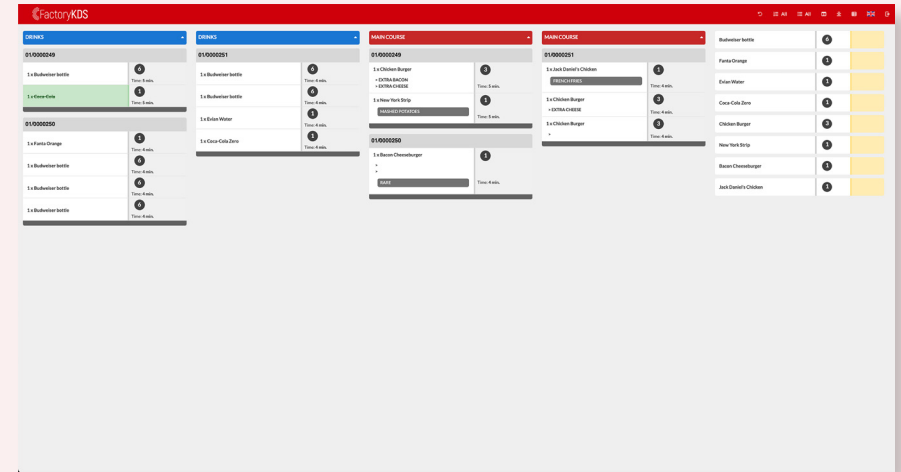

This module activates the Fiscal link in those countries like Costa Rica, Chile, Panama, Mexico & Basque Country where the receipts & invoices produced at the Point of Sales system must have an online validation on real-time by the tax authorities.

It is fully integrated with FactoryPOS & FactoryKIOSK.

FactoryKDS

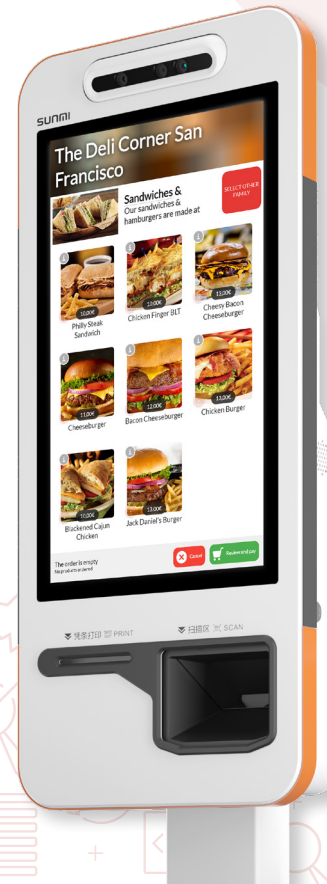

FactoryKDS is our kitchen displays system, that works connected to our Point of Sales applications. It's hosted at our cloud server & requires the FactoryCLOUD/Setup module.

FactoryKDS and the rest of displays can be used on any device with Google Chrome regardless the operating system. It controls an unlimited number of displays. It distinguishes between preparation, delivery and orders pickup. It can also be used as a queue management system on connection with the Point of Sales system.

FactoryKIOSK

FactoryKIOSK is our Point of Sales application that can be installed on large display Android kiosks or in unattended terminals, allowing the customers place the orders by themselves. It has a friendly and easy to use interface, in multiple languages, showing only the required options for every business. It can also process the electronic payments. It can work as standalone or connected in a network with other terminals with FactoryKIOSK or FactoryPOS.

FactoryDISPLAY

FactoryDISPLAY allows showing at the Point of Sales system secondary display, information about the current sale and promotional images and videos. It can be used on embedded second displays or on external Android tablets.

FactoryHUB

FactoryHUB is our aggregator for external online ordering applications.

It's hosted in our cloud and works as the online orders reception center, and organizes the realtime sending to all the stores using FactoryPOS to process those orders.

Each business can configure with which applications is connected and allows you to manage both schedules as other options that allow adapt the operation of FactoryPOS with the external order system.

FactoryCLOUD allows to centralize the products setup, organizing those products into families and subfamilies, images, details of the products, high resolution images and list of prices. Can be set independently for each of the client's stores, facilitating the increase of visibility of the products depending, for example, on the location geographic center.

FactoryCLOUD shows in a screen all the received orders at FactoryHUB.

FactoryORDER

FactoryORDER is our online order application that interacts directly with FactoryCLOUD databases.

It is available as a web application (does not require the installation of any application on the customer's mobile terminal) and adapts to mobile terminals, tablets, iPads and desktop browsers.

It allows four modes of operation:

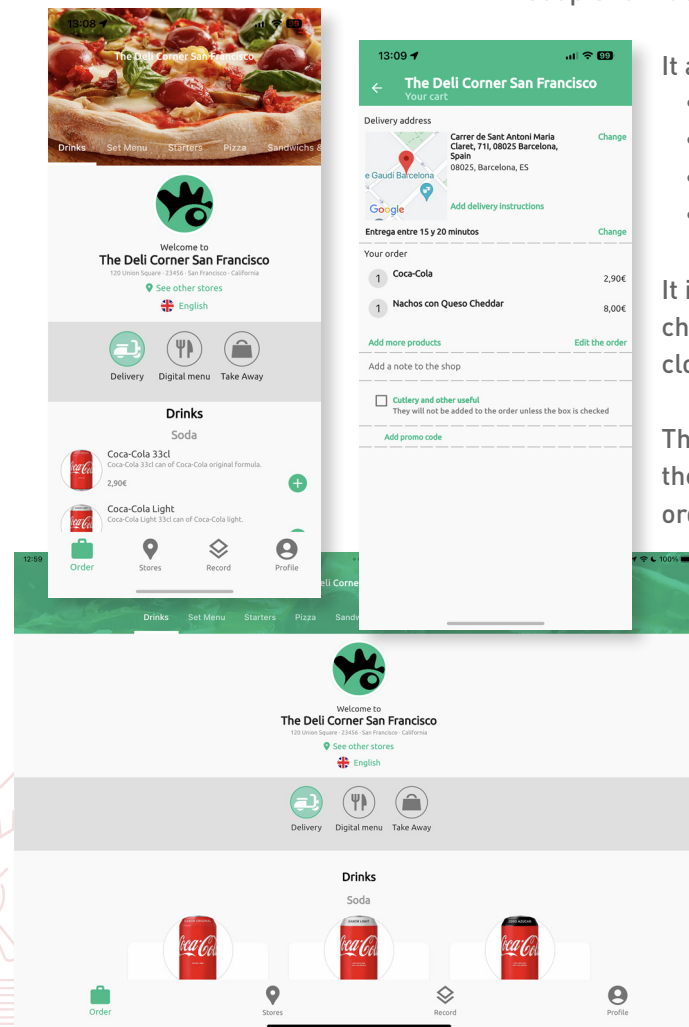

- Home delivery orders
- Pickup orders
- On table orders
- Digital menu

It is a multi-language solution in which the user can choose between the available product languages in the cloud.

The application allows the payment of orders directly at the time of completing the order or paying them in the order delivery process.

Access to FactoryORDER can be done through a web link and also through QR codes (especially for the operating mode of orders at the table).

In clients with a significant number of stores, an application can be supplied in Android and iOS that would be available in the App Store and Google Play.

CONNECTED

With only one terminal or multiple terminals network connected. Printers, cash drawers, customer displays, barcode readers, weighing scales, magnetic stripe readers, NFC, payment terminals, etc.

FRIENDLY

The software configuration process is easy and guided. Any user can setup, learn and use the applications without having a previous training and the needed support is really small.

VERSATILE

Bars, restaurants, bakeries, cloth shops, food shops, general retail. The applications can be adapted to multiple sales environments.

FRIENDLY

Today's retail and hospitality businesses are changing. The customers and shop owners have the technology at their service to simplify each process. Our applications allow the company to receive their orders on many ways and from many channels:

- They can register their sales on their POS terminals with **FactoryPOS**.
- They can take the orders on mobile terminals with **FactoryPOS**.
- The customers can place their orders on self-ordering kiosks with **FactoryKIOSK**.
- The customers can view their orders on displays with **FactoryDISPLAY** as well as promotions with multimedia files.
- The customers can place their orders directly using **FactoryORDER**.

Once the order is received, it can internally be processed with the rest of our applications:

- The preparation can be controlled with **FactoryKDS**.
- The order delivery and pickup can be also organized with **FactoryKDS**.
- You can also organize the queue management with **FactoryKDS**.

Once the order process is finished, the shop owner can control his business:

- Using **FactoryCLOUD**, you can verify the sales of one or multiple outlets on any device with a web-browser, anytime, anywhere. You can manage your databases, change prices, and through the backup service you can be sure that your data is safe.

MODULAR

From the simplest operation to the most powerful options, our software allows you to add functionalities adapted to the needs of the business.

UPDATED

Our solution is updated regularly with new and interesting functionalities as well as future optional modules.

GLOBAL

Sold in 46 countries & regions. Translated into 24 languages. It allows multiple currencies and product descriptions in several languages.

PAYMENT DEVICES

Our applications can also interact with payment terminals, to process the payments through electronic media with payment gateways: Traditional credit cards (VISA, MASTERCARD...), new electronic payments (Apple Pay, Google Pay, ...) and certain countries payments (WeChat Pay, Alipay, MIR, ...). The availability depends on each market.

In some countries it is not possible to develop an interface with payment gateways, in other countries there are some payment gateways connected with our applications and in some others we don't have any payment gateway connected, but we can study the viability on interfacing any Payment gateway, through an agreement of the terms and conditions for the development.

The devices can be connected in many ways and generally they are provided by the Payment gateway. Our current applications that can be connected through Payment gateways are: **FactoryPOS** & **FactoryKIOSK**.

The latest generation of Android SmartPOS payment terminals suppose one step forward on payment technologies. Due to that reason, we have developed **FactoryGATEWAY** as a tool that enables the connection between any Point of Sales application with the SmartPOS terminal, through a simple connection API.

We also offer training to our partners using standard video communication tools like Skype or Microsoft Teams. As our applications have been designed as very easy to learn, setup and use, the required aftersales support is small and easy to handle. We also provide free software licenses to our partners, for testing, for their showroom, for exhibitions, events, etc.

Our applications are sold on SaaS mode with a monthly or annual fee. We have a cloud-based licenses control portal.

SPECIAL PROJECTS

We have developed projects in cooperation with hardware manufacturers, in order that the application is pre-installed and licensed at the factory and it works in perfect combination with the hardware. We can sell our applications on an OEM business model. We can customize the application logo, the colours We can customize the application logo, color palette and even all the application icons to show the desired image in each project. Let us know the size of your project, the specific requirements required and the implementation plan to find the best way to reach an agreement.

We have developed projects with payment entities, where they offer store owners a complete solution, which includes Point of Sale hardware, Point of Sale software, payment terminals and additional applications. We have customized our Point of Sale applications to be able to sell them by modules. In this way, the store owner only uses the modules he needs, which makes the project even simpler. We have created interfaces to link the ERP applications of other companies.

Most of our applications offer a connection API so that other software manufacturers can use them as part of their software packages, with their own brand and logos. If you need to connect a special device or have a specific module, explain us your plan!

If you are interested in developing a specific project, please contact us, we can adapt and **customize** our solution to the needs of your project.

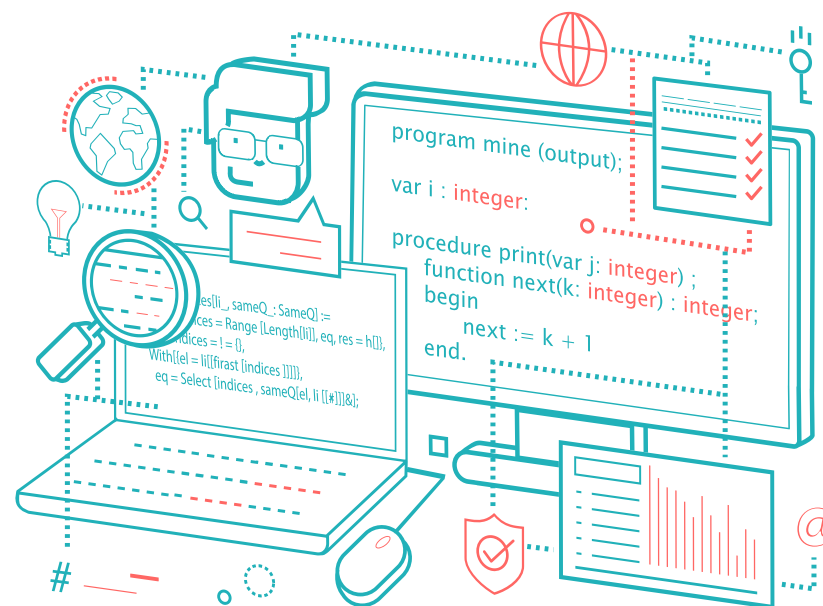

APPLICATIONS ADAPTED TO INTERNATIONAL MARKETS

Our software applications are made for you. You have to easily understand how to use them, in your own language. We have translated our applications into more than 20 languages. You can select the language interface you are most comfortable with, regardless of the country's official language, since receipts will appear in the official language. Our software provides online Help, using the Gitbook platform, which allows us to show on every screen all the procedures that can be performed or even functional videos. If any of our partners is interested in translating online help into their own language, we give you full access to the Gitbook platform.

Adding a new language is very simple. We provide an Excel file and our partner interested in having that new language in our applications, has the possibility of performing the translation. As easy as this. Our software can also use the language of your employees and customers. It is possible to display the names of the products in different languages in the kitchen, but also to your customers, FactoryPOS and FactoryKIOSK, can display the products in as many languages as necessary. We can print the names of the products in several languages at the same time, so that it is easy to understand. When we adapt it to new markets, we create in our system what we call a new "Region", where we configure by default the language, the accepted currencies, the allowed payment methods and the taxes.

Finally, we adapt the software to the country's tax regulations. Currently our applications are adapted to 46 countries and regions. We have experience with different fiscal regulations: fiscal printers, fiscal boxes, exports of fiscal data, electronic invoices, etc. If we have to add a new country with a specific tax regulation, we must make a plan together with our partner to determine the effort necessary to carry out the new implementation.
